UNIVERSITÀ DEGLI STUDI DI MILANO

Mappa di rischio di Infezione Potenziale per il 17/06/2019

La mappa mostra quanto le condizioni meteorologiche giornaliere siano favorevoli ad eventi di infezione da Alternaria. Le stime derivano da simulazioni condotte con modelli di simulazione specificatamente sviluppati e fanno riferimento all'intero periodo 15/06/2019 - 19/06/2019. Per ciascun comune, il rischio riportato è la media dei valori stimati su celle 2×2km all'interno del comune.

Il valore di *Rischio Medio* corrisponde alla media stimata in un intervallo di ±2 giorni rispetto alla data corrente.

Andamento per comune dal 15/06/2019 al 19/06/2019

Per ciascun comune dell'area planiziale romagnola viene riportato il rischio aggregato e l'andamento del rischio stimato nel periodo di ±2 giorni dalla data corrente. I grafici illustrano l'andamento giornaliero del *Rischio Stimato*.

Si tenga presente che le stime per i giorni futuri sono basate su previsioni meteorologiche, inevitabilmente soggette ad un margine d'errore.
